SUMMARY

Software Engineer with 3+ years building C#/.NET Core microservices, REST APIs, and Angular apps for enterprise SaaS. Currently at Verisk (Catastrophe & Risk Solutions) on AWS; hands-on with GenAI and LLM integration.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, Python

Backend: ASP.NET Core, Web API, Entity Framework, Microservices, ADO.NET, REST APIs

Frontend: Angular, HTML, CSS, Tailwind CSS

Databases: SQL Server, Oracle, MySQL

Cloud/DevOps: AWS (EC2, Lambda, S3, IAM, RDS), Docker, CI/CD, Git

AI & LLM Tools: Claude, ChatGPT, Gemini, Amazon Bedrock, LLM Integration

Tools: Postman, GitHub, Jira, ETL

PROFESSIONAL EXPERIENCE

Software Engineer II

Jul 2026 – Present

Verisk, Hyderabad, India

Catastrophe & Risk Solutions (CRS)

- Developing and enhancing backend services in C# and .NET Core for the Catastrophe & Risk Solutions platform, implementing new features across microservices and RESTful APIs.
- Building and integrating cloud features on AWS (EC2, Lambda, S3, IAM, RDS).
- Researching and evaluating technical approaches (R&D) for new features before implementation.
- Contributing to Angular frontend modules and SQL-backed data layers in Agile sprints.

Associate Software Engineer

Mar 2024 – Jul 2026

Infor, Hyderabad, India

- Built 10+ backend microservices in C# and .NET Core for a multi-tenant enterprise SaaS platform serving thousands of concurrent users.
- Designed and shipped RESTful APIs with pagination, filtering, schema validation, and structured error handling — reducing invalid request errors by ~30% and accelerating frontend integration cycles.
- Engineered a bulk data ingestion pipeline processing 10,000+ records per run from Excel/XML files with row-level validation and failure recovery, cutting manual data entry effort by ~65%.
- Built GenAI-powered document processing workflows for PDF, Excel, and XML extraction using prompt-based pipelines, enabling intelligent data extraction and automated response generation for enterprise operations.
- Optimized complex SQL and Oracle queries using execution plan analysis, strategic indexing, and query restructuring, improving performance by 40% across critical reporting modules.
- Implemented JWT-based authentication and role-based access control (RBAC) across backend services, securing role-scoped access and enforcing least-privilege data access policies.
- Diagnosed and resolved 20+ critical production incidents involving backend services, login flows, and data inconsistencies using structured trace log and Event Viewer analysis.
- Migrated a legacy ASP.NET (ASPX) QA regression testing tool to a modern Angular frontend, reducing QA setup time by ~50% for 15+ engineers.
- Partnered with QA, frontend, and product teams in an Agile environment to deliver enterprise features and production fixes; maintained CI/CD pipelines for build, test, and deployment of microservices.

Associate Software Engineer

Sept 2023 – Feb 2024

Tech Mahindra, Hyderabad, India

- Developed and maintained backend APIs using Java Spring Boot for notification and booking management modules serving production users.
- Resolved production bugs and performance bottlenecks, and contributed to unit testing, code reviews, and deployments across Agile sprints, reducing regression defects.

EDUCATION

Presidency University

Bengaluru, India

Bachelor of Technology in Computer Science and Engineering; CGPA: 8.5/10

Aug 2019 – Jun 2023

ACHIEVEMENTS

- 1st Place** – Tech Mahindra Innovation Competition for PranarakshaSeva, a real-time GPS emergency platform.
- Published research paper on distributed system architecture in Novyi Mir Research Journal (2023).
