TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, Python

Backend: ASP.NET Core, Web API, Entity Framework, Microservices, ADO.NET, REST APIs

Frontend: Angular, HTML, CSS, Tailwind CSS

Databases: SQL Server, Oracle, MySQL

Cloud/DevOps: AWS, Docker, CI/CD, Git

AI/GenAI: Amazon Q, Kiro, Prompt Engineering, LLM Integration, GenAI Workflows

Tools: Postman, GitHub, Jira, ETL

PROFESSIONAL EXPERIENCE

Software Engineer

Mar 2024 – Present

Infor, Hyderabad, India

- Architected 10+ backend microservices in C# and .NET Core for a multi-tenant enterprise SaaS platform serving thousands of concurrent users.
- Designed and shipped RESTful APIs with pagination, filtering, schema validation, and structured error handling — reducing invalid request errors by ~30% and accelerating frontend integration cycles.
- Engineered a bulk data ingestion pipeline processing 10,000+ records per run from Excel/XML files with row-level validation and failure recovery, cutting manual data entry effort by ~65%.
- Built GenAI-powered document processing workflows for PDF, Excel, and XML extraction using prompt-based pipelines, enabling intelligent data extraction and automated response generation for enterprise operations.
- Integrated Amazon Q and Kiro into daily development workflows for AI-assisted code review, debugging, and optimization — improving development throughput and reducing bug-fix cycle times.
- Optimized complex SQL and Oracle queries using execution plan analysis, strategic indexing, and query restructuring, improving performance by 40% across critical reporting modules.
- Implemented JWT-based authentication and role-based access control (RBAC) across backend services, securing role-scoped access and enforcing least-privilege data access policies.
- Diagnosed and resolved 20+ critical production incidents involving backend services, login flows, and data inconsistencies using structured trace log and Event Viewer analysis.
- Migrated a legacy ASP.NET (ASPX) QA regression testing tool to a modern Angular frontend, reducing QA setup time by ~50% for 15+ engineers.
- Partnered with QA, frontend, and product teams in an Agile environment to deliver enterprise features and production fixes; maintained CI/CD pipelines for build, test, and deployment of microservices.

Associate Software Engineer

Sept 2023 – Feb 2024

Tech Mahindra, Hyderabad, India

- Developed and maintained backend APIs using Java Spring Boot for notification and booking management modules serving production users.
- Diagnosed and resolved production bugs and performance bottlenecks, contributing to feature enhancements across multiple sprint cycles in Agile workflows.
- Collaborated on unit testing, code reviews, and deployment activities, improving code quality and reducing regression defects.

Software Engineering Apprentice

Feb 2023 – Aug 2023

Tech Mahindra, Hyderabad, India

- Built and tested RESTful APIs using Java and Spring Boot in enterprise-scale training projects, implementing CRUD operations, MySQL database integration, and API validation end-to-end.
- Contributed to bug fixing and feature enhancement tasks in Java-based applications within Agile processes using Git and Jira.
- Gained practical exposure to microservices architecture and backend development best practices through mentored collaboration with senior engineers.

NOTABLE PROJECTS

- HuntDesk – AI Job Application Tracker** | *React, FastAPI, PostgreSQL, Gemini AI* 2024
- Built a full-stack AI-powered job tracking platform; won internal hackathon recognition for best use of Gemini AI in a productivity tool.
 - Developed a resume processing pipeline using Gemini AI to extract skills and experience, automating job-fit scoring and reducing manual screening effort by ~70%.
 - Built FastAPI backend services with JWT authentication, PostgreSQL integration, and optimized queries; designed analytics APIs for tracking application response rates and skill-gap insights.
 - Deployed frontend on Vercel and backend on Railway; architecture follows same microservices and API patterns applied in .NET production environments.
 - Live: huntdesk.vercel.app | GitHub: github.com/Suryab02/huntdesk
- PranarakshaSeva – Emergency Response Platform** | *React, Node.js, Express.js, MongoDB*
- Won **1st place** in Tech Mahindra Internal Innovation Competition; built a real-time emergency response platform with GPS-based location tracking and live assistance features.
 - Designed and implemented REST APIs for authentication, user management, and real-time location services with JWT-based access control and MongoDB schemas for scalable data storage.
 - Work recognized with a published research paper on distributed system architecture (Novyi Mir Research Journal, 2023).
- CityEatsInsight – Food Trend Analysis Platform** | *React, FastAPI, Gemini AI, Reddit API* 2024
- Built a data aggregation and sentiment analysis platform identifying restaurant and food trends from social media using NLP workflows and Gemini AI.
 - Optimized API performance using caching and request batching, reducing external API calls by 60% and improving response throughput.
 - Live: city-eats-insight.vercel.app | GitHub: github.com/Suryab02/CityEatsInsight

EDUCATION

Bachelor of Technology in Computer Science and Engineering	Aug 2019 – Jun 2023
<i>Presidency University, Bengaluru, India</i>	<i>CGPA: 8.5/10</i>

ACHIEVEMENTS

1st Place – Tech Mahindra Internal Innovation Competition for PranarakshaSeva, a GPS-based real-time emergency response platform.

Published research paper on distributed system architecture and real-time data handling in **Novyi Mir Research Journal (2023)**.
